Batch Clip In ArcGIS

1. Find the **Clip** tool using ArcGIS Search (Ctrl+F)
   - **Right-Click** on the link to open the tool in **Batch Mode**

2. **Click and Drag** selected layers to be clipped into the Batch grid under **Input Features**.

3. Set the **Clip Feature** using the drop-down, and choose from the available layers

4. **Right-Click**, and **Fill**, to autofill the same Clip Feature for the remaining layers

5. Leaving the **Output Feature Class** blank will place the Output Features into the Default Geodatabase with the name *Input Layer Name_Clip*. 
6. Clipped layers are added into the map document
